Flea Treatment Prep Sheet

Fleas spend 95% of their lives living down in carpets and cracks of wood floors. They only spend 5% of their lives up on hosts (cats, dogs or humans). They don't nest inside furniture or beds. They prefer dark, quiet spots like under beds, basement floors and in closets.

What must be done before the technician arrives:

Remove all small items (shoes, clothes, magazines, toys etc...) from floors throughout living area, basement and especially in closets.

Vacuum: Vacuum all floors, especially under furniture, beds, and in closets. Also vacuum basement floors (if you have a basement). Put vacuum bags in plastic bags and tie securely and dispose of in the outside dumpster.

Be prepared to leave the unit for 4-6 hours from the time the technician arrives. All pets must be removed from the apartment. Cover fish tanks with plastic wrap and turn off pump until you return.

Do not treat the unit yourself using foggers or over the counter bombs or anything else.

Please allow 3 weeks for the treatment to be effective.
Success depends on your cooperation!!!

If you have any questions please call contact person at your facility.

Thank you
